

nioneniOS

VERSION 1.0

©2022 Nioneni Corporation Limited

About

nioneniOS is a computer operating system based on Debian Linux. It is developed by Nioneni Corporation Limited, a very young private company based in Kenya, East Africa. The purpose of this operating system is to normalize Linux across Africa for individuals, institutions, governments and companies. It is only supported on the x86-64 architecture at the moment. It is not as polished as most Linux distributions like Fedora, Ubuntu, SUSE, Elementary OS and Arch. Future distributions will be better.

Installation

nioneniOS is free to download and use and is hosted on Google Drive. Click and download the operating system (nioneniOS_1_x86-64.tar.gz) from the links provided on at:

The official website (<https://nioneni.com>)

The official Telegram channel (<https://t.me/nioneni>)

The official Github repository of nioneniOS

Unzip the .tar.gz file and install it onto a flash drive using the balena-etcher software or your software of choice. Boot into the BIOS of your device and disable secure boot if it is enabled and then boot into the flash drive and test it out. If you like it, go ahead and install it.

The username is: **afrika**

The password is: **afrika**

Design

nioneniOS is designed to be very light so as to reduce strain on any device. The default colors are sand brown, olive green and yellow.

The Graphical User Interface is a customized version of the IceWM Window Manager. You can customize further it or install your own window manager.

Software

The software used is from the official Debian Linux repositories. nioneniOS does not include a lot of software so as to maintain a small .iso file size. You can add software from your own sources.

Support

Get additional services such as: firewall setup, traffic monitoring, 24/7 customer support, additional proprietary software and monthly reports on vital topics such as Cybersecurity.
